<body>

/* The first step I've took to solving this problem was implementing a script
that curls all IP addresses in a loop then extracts them for their latitude
and longitude. Next, I wrote another script that reads through the same IPs,
setting each IP next to its latitude and longitude extracted via the same
line

number in the separate geolocation files from the previous script.
Afterwards,

the script extracts the same IP addresses again, sorts them by unique values,
```

and puts them into a separate array that'd be used to determine its color marker based off how frequent it appears in the list. As the loops created the arrays, separate files were made as temporary storage until it was needed. These files were then removed upon completion, saving the final text files as MIDDLE.txt that'd be combined with other text files. In this script, I've also wrote separate text files for the first half of this HTML file, and the last half that comes after the middle part, where the arrays are created. In the first part of this script, I've specified the map's size and its background color alongside the start of the function that specifies the map as HEAD.txt. In the last half, I've finished the function specifications, including its IP popup and how the markers should be colored before setting the Google API key to generate the map as TAIL.txt. These files were put together to form a single HTML file titled markerMAP.html in conclusion. */
